External contour (Render + Vercel + Supabase)

English version of ../../architecture/deployment-current.md.

```
flowchart LR
    user([User]) -->|HTTPS| vercel[Vercel\nReact/Vite]
    vercel -->|HTTPS API| render[Render\nFastAPI]
    render -->|TLS PostgreSQL| supabase[(Supabase\nPostgreSQL)]
```

Vercel publishes the static frontend. Render serves the API. Supabase provides PostgreSQL. The backend CORS policy restricts the allowed origins.

This contour needs no infrastructure of its own and is used as a public demo stand. The main contour is Yandex Cloud (see deployment-yandex-cloud.md).
