# Documentation index

English version of ../index.md. Entry point. The existing documents are kept; this page holds the map and the rules.

| Question | Document |
|---|---|
| Run from scratch | ../../BUILD.md, DEPLOYMENT.md |
| Understand the architecture | architecture/ARCHITECTURE.md, architecture/c4-context.md, architecture/c4-components.md |
| Data model | architecture/er-model.md, database/migrations.md |
| Roles and sign-in | ADMIN_GUIDE.md, KEYCLOAK.md |
| What a feature does | modules/ |
| What to borrow for another project | modules/module-map.md |
| API errors | ERROR_CODES.md, api/conventions.md |
| Operations and production | operations/deployment.md, operations/monitoring.md |
| Security | SECURITY.md, security/SAST-SCA.md |
| AI summary | AI.md |
| For the user | USER_GUIDE.md |
| Pitch and defence | pitch.md, qa-jury.md |
| What proves it works | verification/matrix.md, CI |
| What the audit fixed | audit/portability-audit-2026-10-29.md |

## Rules

1. A claim without a check is a promise. See verification/matrix.md.
2. A new module without a specification following modules/module-template.md is not considered done (verified by `make docs-check`).
3. The two CI descriptions (`.github/workflows/ci.yml` and `.sourcecraft/ci.yaml`) must match in the set of checks; a divergence is a defect, not a convenience.

## Project management

- `forge.sh` / `forge.bat` — start, stop, logs, tests, database and containers with one command; see the section in the README.
